Chen Yang

chenyang@link.cuhk.edu.cn | (+86) 15267711552

The Chinese University of Hong Kong, Shenzhen, China, 518172

Education

The Chinese University of Hong Kong, Shenzhen 09/2022 – 05/2027 (Expected)
Major in Electrical and Computer Engineering

- Cumulative GPA: 3.856/4.0 (Rank: 5/116)
- Research Interests: Robot Learning, Reinforcement Learning
- Awards & Honors: Creativity and Innovation Award, 2024; Academic Scholarship, 2023 & 2024; Dean's List, 2023 & 2024 & 2025 & 2026

University of California, Berkeley 09/2024 – 12/2024
Visiting Student

- Cumulative GPA: 4.0/4.0
- Related Courses: Computer Architecture, Artificial Intelligence, Discrete Math (A+)

Publications

[1] Feiyang Wu, Chenxiao Gao, **Chen Yang**, Ye Zhao, Bo Dai, and Anqi Wu. "Learning Expressive and Compositional Motion Representation via Spectral Skills." 2026. IROS 2026 Workshop Best Paper.

Research Experience

Robot Motion Generation 01/2026 – Present
Research Intern, Advisor: Guiliang Liu
DexForce

- Lead research on robot motion generation, focusing on producing feasible motions under diverse constraints.
- Further details coming soon.

Learning Expressive and Compositional Motion Representation via Spectral Skills 06/2026 – 09/2026
Research Intern, Advisors: Prof. Ye Zhao and Prof. Anqi Wu
LiDAR Lab & BRAINML Lab, Georgia Institute of Technology

- Pretrained, fine-tuned, and evaluated the high-level planner using predictive spectral skills as commands for a low-level whole-body controller.
- Reproduced baselines, including SONIC, and helped design ablation studies to assess key modules and design choices.
- Worked with the team to build sim-to-sim and sim-to-real pipelines and deploy simulation-trained policies on a Unitree G1 humanoid.

Smart Stop Snoring Pillow 09/2023 – 04/2024
Research Assistant, Advisor: Prof. Jian Zhu
Soft Robotics Lab, CUHKSZ

- Designed and built an integrated pneumatic soft-robotic pillow for non-invasive snoring mitigation, combining pneumatic, electronic, sensing, and embedded-control subsystems.
- Modeled airflow through the tubing and airbag using Poiseuille's law and pressure differentials from two barometers to estimate flow and precisely control airbag height; built ROS-based middleware connecting the host computer and microcontroller.
- Applied FFT to barometric-pressure signals to estimate heart and respiratory rates, and developed a Transformer-CNN classifier to distinguish snoring from non-snoring events.

Internship

DexForce 01/2026 – Present
Research Intern

- Core contributor to EmbodiChain, an end-to-end, GPU-accelerated, modular platform for embodied AI.
- Refined and developed EmbodiChain's RL framework for manipulation, humanoid motion, and VLA post-training.

Shenzhen Research Institute of Big Data 04/2024 – 08/2024
Research Intern

- Developed an LSTM-T-KAN model for efficient, accurate long-horizon building-load forecasting to support power allocation.
- Extracted frequency-domain features using the Fast Fourier Transform (FFT).

Teaching

Teaching Assistant

ECE3080 Introduction to Embedded Systems	2026–27 Term 1
ECE3810 Embedded Systems Laboratory	2026–27 Term 1
PHY1001 Mechanics	2023–24 Term 2

Skills

Programming Languages: Python, C/C++, MATLAB, Java
Technologies & Frameworks: PyTorch, TensorFlow, ROS, Linux, Git
Languages: English (TOEFL: 102), Chinese (Native)
